PUBLICITY GUIDELINES
Updated: June 1, 2016

These guidelines are intended to streamline communications between faculty, students and staff and the Philip and Rita Rosen Department of Communications and Public Affairs (DCPA), so we can disseminate information about Einstein quickly and effectively to internal and external audiences.

Einstein DCPA coordinates closely with the Montefiore media & public relations and marketing departments. If you have contacted or plan to notify both Einstein and Montefiore about a particular request, please make note of that in your correspondence.

PUBLICITY EVALUATION AND OPTIONS

A number of publicity options are used by DCPA. These include: press releases, research round-ups, academic honors, mentions in the e-newsletter Einstein Connection, summaries in Einstein magazine, Web features, video interviews or features and mentions on flat-screen monitors located in lobbies throughout the campus.

We regularly promote Einstein on the College of Medicine’s official social media platforms, including Facebook and Twitter. We also encourage faculty, students and staff to submit ideas for potential submissions to our blog, The Doctor’s Tablet. To learn more about Einstein social media, including the blog, please visit our Social Media Hub or email us at socialmedia@einstein.yu.edu.

We look forward to working with you to publicize Einstein’s significant contributions.

HIGHLIGHTS

- Notification for all news items should be sent to notification@einstein.yu.edu, which reaches all members of the DCPA editorial team.

- To ensure complete consideration for peer-reviewed research, please alert DCPA within 48 hours of learning that a paper has been accepted. (Please note: DCPA does not receive notification from journals that papers have been accepted.)
  - The news media and DCPA consider the first date of issue—even of uncorrected proofs posted online—the publication date. This date may precede print publication by several weeks or even months. As a rule, members of top-tier media will not consider covering research after its publication date.

- DCPA honors all embargoes. We regularly work with journals, funding organizations and partner institutions on embargoed news and studies. While a journal may tell you not to make the information public until a certain date, this instruction applies only to notifying the general public, not to notifying the communications professionals at Einstein. We honor all embargoes.

- DCPA enlists the help of faculty in reviewing peer-reviewed research for publicity. In consultation with respected Einstein investigators in basic, translational and clinical research, DCPA evaluates all submissions for their likely interest to external and internal audiences.

PEER-REVIEWED RESEARCH
When notifying DCPA about an upcoming publication, please include the following:

- A manuscript of the accepted paper and the title of the journal;
- Identification of the corresponding author;
- Brief answers to the following questions:
  - What is novel or publicity-worthy about this research?
  - How does this research change what is known about this area of research?
  - What, if any, is the potential public health relevance of this research?
  - To what degree, if any, has Montefiore or any of our clinical affiliates contributed to this research?

Please craft your answers so that they can be understood by faculty members who are not experts in your field and, if possible, by an informed lay audience of nonscientists.

Please notify DCPA within 48 hours of learning that your paper has been accepted by a peer-reviewed journal.

- To ensure accuracy, DCPA needs ample time to review all materials under consideration; conduct interviews, if applicable; and draft, edit and release publicity material.

Since our department does not receive notification from journals that papers have been accepted, it is imperative that faculty members notify us immediately after their papers have been accepted if they want their research considered for publicity.

- DCPA does not issue releases for review papers. However, DCPA does consider them for internal publicity.

As a rule, Einstein will consider issuing a release for research for which an Einstein faculty member is the first, last or corresponding author. If the corresponding author is at an outside institution, please explain your contributions. That way, when we coordinate with the collaborator’s institution, we can ensure that you receive appropriate attribution for your contributions in press materials from that institution.

If the subject matter may have commercial applications, please e-mail the offices of biotechnology and business development at biotech@einstein.yu.edu as soon as possible to discuss whether patent protection should be pursued.

GRANTS

Our department receives internal notification of National Institutes of Health (NIH) grant awards on a regular basis. However, if you have been awarded a grant and would like to bring it to our attention directly, please notify us.

Consideration for publicizing grants externally will be prioritized based on these criteria:

- Newsworthiness—
  - The study, center or initiative being funded would be of broad interest, or of interest to important audiences, including prospective students and faculty, potential funders and stakeholders in the medical or medical education fields.
The focus of the work addresses an unmet medical need or fills a compelling societal or social need.

- Novel approach—The proposed initiative or research is unique in a particular specialty or in the medical field overall.
- Strategic interest—The area of funding falls within one of Einstein’s institutional priorities as established by the Strategic Research Plan.

ANNOUNCEMENTS

DCPA is interested in important announcements concerning your department. Here is a partial list of areas of interest:

- National or international awards;
- Major gifts to Einstein, including grant awards received by faculty, postdocs or students that represent funding from entities other than the NIH;
- Interesting initiatives that have local, national or international importance;
- Senior-level staff appointments that have significance outside Einstein;
- Significant speaking engagements (keynote-level) at lectures, symposia and conferences.

OP-EDS/LETTERS TO THE EDITOR

DCPA encourages faculty members to engage with the public at large on topics related to medical education, biomedical research and health through published outlets outside the peer-review process, including op-eds and letters to the editor.

For letters to the editor and op-eds in which you mention your Einstein affiliation, we request that you share your submissions with us prior to publication. We would like to be alerted so that we can ensure that submission guidelines are followed prior to submission and also so that we can fully monitor Einstein’s media presence should the piece be published.

We appreciate that timeliness is a factor in these types of submissions and will make every effort to respond as quickly as possible to your e-mail.

EVENTS

DCPA is also interested in important events concerning faculty, postdocs and students, including:

- Major lectures, symposia and conferences, both internal and connected to your involvement with professional organizations in which you play a leadership or integral role;
- Department-wide events whose topics may appeal to the media;
- Einstein-wide events, including new faculty welcome, Match Day and graduation day;
- Community events that highlight Einstein’s commitment to the Bronx and community service.

With regard to requests for photography and audio and video recording: DCPA can help schedule such coverage. However, many of these services require a charge back to your department or program from creative services. When making such requests, please provide a funding number.
