Commercial Catalysts in the Early-Stage Life Sciences Technology Ecosystem

Building on earlier “SCIENCE & BUSINESS” series presentations, members of the venture capital, pharmaceutical, entrepreneurial, and angel investing communities will participate in a panel discussion on their approaches to advancing early-stage life sciences technology and business opportunities. Mr. Richard Kosman (Einstein’s Director of the Office of Business Development) will serve as moderator of this informative and enlightening discussion.

Some questions to be addressed include:

- Which life sciences areas are “investable”? Why?
- What characteristics make a particular opportunity attractive?
- What are the components of an attractive business plan?
- What attributes should Einstein and/or Einstein’s inventors seek in potential commercial collaborators?
- What financial return is expected on life sciences investments?
- What is the career path to enter these industries?

This talk is applicable to faculty, students, post-docs, and staff. All are invited to attend!

Thursday, May 5, 2011
4:00PM
LeFrak Auditorium (1st Floor)
Price Center/Block Research Pavilion
Light refreshments will be served.

This event is co-sponsored by the Offices of Biotechnology and Business Development, The Graduate Division of Biomedical Sciences, and the Belfer Institute for Advanced Biomedical Studies.
