The Einstein Journal of Biology and Medicine (EJBM) is a peer-reviewed general medical scientific journal edited by the students, faculty, and alumni of the Albert Einstein College of Medicine. The major purpose of EJBM is to serve as a forum for the basic and clinical investigation being conducted by the members and alumni of the Albert Einstein College of Medicine as well as other academic medical scientific institutions. In addition, an important aim of EJBM is the publication of articles written by students, postdoctoral fellows, house officers, and junior faculty members. Thus, EJBM encourages original investigation by scientists and physicians in training.

The contents of EJBM encompass the results of basic and clinical investigation, as well as those disciplines at the interface of medicine and the social sciences, medico-legal and ethical studies, epidemiology, public policy, and the history of medicine. EJBM publishes articles in all fields of biology and medicine, and invites contributions from any scientific or clinical department.

EJBM publishes two issues per year and is funded through grants from the Office of Medical Education at the Albert Einstein College of Medicine. For more information or to submit a manuscript, please visit our website (http://www.einstein.yu.edu/ejbm). Contact us at: ejbm@med.einstein.yu.edu.

The Editorial Board would like to thank Frances and Robert Kramer and Kathie Kramer Rudy for their generous gift in support of The Einstein Journal of Biology and Medicine.
