20th Annual Young Investigators Symposium to be held at Moses Campus

The 2013 Young Investigators Research Symposium will be held on April 5th, 8am-4pm, at the Cherkasky Auditorium on the West Campus. Sponsored by the Office of Research and Sponsored Programs of MMC, twenty-five junior investigators will present their research at the symposium, representing twelve different clinical departments. Awards for Research Excellence will be presented to first place, three-second place, and four-third place investigators.

One-stop-shop to help you navigate resources

Translational research can be a complex enterprise, since any one project involves multiple team members, scientific expertise, and resources. The ICTR’s “Project Acceleration Resource” (PAR) helps coordinate ICTR and Einstein-Montefiore resources, and can assist to streamline and enhance project implementation by integrating expertise and by facilitating efficient access to resources. PAR will also provide budget development and grant application support for junior investigators, and comprehensive planning support for development of multi-function program grants. The PAR is a “one-stop-shop” that includes administrative and faculty personnel representing all ICTR functions.

Contact the PAR team by phone at 718-430-2500, or go to our web portal:

New Research Opportunities: Antihypertensive and Lipid-Lowering Treatment to Prevent Heart Attack Trial (ALLHAT)

ALLHAT was the largest antihypertensive treatment trial and the second largest lipid-lowering trial ever conducted, collecting data from 1994-2002. The trial benefited from a randomized active phase of 5 years, long-term follow-up, large sample size, varied geographic regions, patient diversity, drug comparisons, and the large number of variables. The data, previously restricted to ALLHAT investigators, is now available to the wider scientific community, encouraging new research, especially for junior investigators and CTSA institutions. For more information on accessing ALLHAT data, visit: https://ccct.sph.uth.tmc.edu/allhatoutreach/Default.aspx

Karen Gallinari, JD is now Co-Chair of the Biobank Working Group of the CTSA Clinical Research Ethics Group.

Shlomo Shinnar MD, PhD has been awarded a Javits Neuroscience Investigator Award by NIH. The award recognizes the contributions of Dr. Shinnar’s long-standing R01-funded study of febrile seizures in children. Congress established these awards for neuroscience research in honor of the late Senator Jacob K. Javits of New York. Dr. Shinnar is Professor of Neurology, Pediatrics and Epidemiology and Population Health.
